1. Overview

1.1 Introduction

The E104-BT54S module is a wireless SOC module designed based on the BLUENRG355MC chip solution..It has a variety of transmission methods, working in the 2.4GHz frequency band, TTL level output, and 3.3V IO port voltage.

The BLUENRG355MC chip is based on a high-performance ARM Cortex-M0+ 32-bit core processor with a working frequency of 1MHz-64 MHz. The chip is embedded with high-speed memory (up to 64kbytes of SRAM), as well as a wide range of enhanced I/Os and peripherals. For more information on the chip, please refer to the official documentation.

This module is a pure hardware SoC module without a program at the factory. The Bluetooth-based function of broadcasting, scanning, connection, transparent transmission etc. can only be used after users’ secondary development on it..
