Revision 2.6

(Jul. 2024)

## Table of Contents

|                                                                            |           |
|----------------------------------------------------------------------------|-----------|
| <b>Table of Contents .....</b>                                             | <b>1</b>  |
| <b>List of Figures .....</b>                                               | <b>4</b>  |
| <b>List of Tables .....</b>                                                | <b>5</b>  |
| <b>1. General description .....</b>                                        | <b>7</b>  |
| <b>2. Device overview .....</b>                                            | <b>8</b>  |
| 2.1. Device information .....                                              | 8         |
| 2.2. Block diagram.....                                                    | 9         |
| 2.3. Pinouts and pin assignment .....                                      | 10        |
| 2.4. Memory map .....                                                      | 13        |
| 2.5. Clock tree .....                                                      | 16        |
| 2.6. Pin definitions.....                                                  | 17        |
| 2.6.1. GD32F405Zx LQFP144 pin definitions .....                            | 17        |
| 2.6.2. GD32F405Vx LQFP100 pin definitions .....                            | 25        |
| 2.6.3. GD32F405Vx BGA100 pin definitions.....                              | 32        |
| 2.6.4. GD32F405Rx LQFP64 pin definitions.....                              | 38        |
| 2.6.5. GD32F405xx pin alternate functions.....                             | 44        |
| <b>3. Functional description.....</b>                                      | <b>51</b> |
| 3.1. Arm® Cortex®-M4 core .....                                            | 51        |
| 3.2. On-chip memory .....                                                  | 51        |
| 3.3. Clock, reset and supply management.....                               | 52        |
| 3.4. Boot modes.....                                                       | 53        |
| 3.5. Power saving modes .....                                              | 53        |
| 3.6. Analog to digital converter (ADC) .....                               | 53        |
| 3.7. Digital to analog converter (DAC).....                                | 54        |
| 3.8. DMA .....                                                             | 54        |
| 3.9. General-purpose inputs/outputs (GPIOs) .....                          | 55        |
| 3.10. Timers and PWM generation .....                                      | 55        |
| 3.11. Real time clock (RTC) and backup registers .....                     | 56        |
| 3.12. Inter-integrated circuit (I2C) .....                                 | 57        |
| 3.13. Serial peripheral interface (SPI) .....                              | 57        |
| 3.14. Universal synchronous/asynchronous receiver transmitter (USART/UART) |           |

## 57

|       |                                                            |    |
|-------|------------------------------------------------------------|----|
| 3.15. | Inter-IC sound (I2S) .....                                 | 58 |
| 3.16. | Universal serial bus full-speed interface (USBFS).....     | 58 |
| 3.17. | Universal serial bus high-speed interface (USBHS) .....    | 58 |
| 3.18. | Controller area network (CAN) .....                        | 59 |
| 3.19. | Secure digital input and output card interface (SDIO)..... | 59 |
| 3.20. | Digital camera interface (DCI) .....                       | 59 |
| 3.21. | Debug mode .....                                           | 59 |
| 3.22. | Package and operation temperature.....                     | 60 |
| 4.    | Electrical characteristics .....                           | 61 |
| 4.1.  | Absolute maximum ratings.....                              | 61 |
| 4.2.  | Operating conditions characteristics.....                  | 61 |
| 4.3.  | Power consumption .....                                    | 63 |
| 4.4.  | EMC characteristics .....                                  | 71 |
| 4.5.  | Power supply supervisor characteristics .....              | 71 |
| 4.6.  | Electrical sensitivity .....                               | 73 |
| 4.7.  | External clock characteristics .....                       | 73 |
| 4.8.  | Internal clock characteristics .....                       | 76 |
| 4.9.  | PLL characteristics.....                                   | 77 |
| 4.10. | Memory characteristics .....                               | 79 |
| 4.11. | NRST pin characteristics .....                             | 79 |
| 4.12. | GPIO characteristics .....                                 | 80 |
| 4.13. | ADC characteristics .....                                  | 82 |
| 4.14. | Temperature sensor characteristics .....                   | 84 |
| 4.15. | DAC characteristics .....                                  | 84 |
| 4.16. | I2C characteristics .....                                  | 85 |
| 4.17. | SPI characteristics .....                                  | 86 |
| 4.18. | I2S characteristics .....                                  | 88 |
| 4.19. | USART characteristics.....                                 | 90 |
| 4.20. | SDIO characteristics .....                                 | 90 |
| 4.21. | CAN characteristics .....                                  | 90 |
| 4.22. | USBFS characteristics.....                                 | 91 |

|       |                                          |     |
|-------|------------------------------------------|-----|
| 4.23. | USBHS characteristics .....              | 92  |
| 4.24. | TIMER characteristics.....               | 92  |
| 4.25. | DCI characteristics.....                 | 93  |
| 4.26. | WDGT characteristics .....               | 93  |
| 4.27. | Parameter conditions.....                | 93  |
| 5.    | Package information.....                 | 94  |
| 5.1.  | LQFP144 package outline dimensions ..... | 94  |
| 5.2.  | BGA100 package outline dimensions .....  | 96  |
| 5.3.  | LQFP100 package outline dimensions ..... | 98  |
| 5.4.  | LQFP64 package outline dimensions .....  | 100 |
| 5.5.  | Thermal characteristics .....            | 102 |
| 6.    | Ordering information .....               | 104 |
| 7.    | Revision history .....                   | 105 |

## List of Figures

|                                                                                     |     |
|-------------------------------------------------------------------------------------|-----|
| Figure 2-1. GD32F405xx block diagram .....                                          | 9   |
| Figure 2-2. GD32F405Vx BGA100 pinouts .....                                         | 10  |
| Figure 2-3. GD32F405Zx LQFP144 pinouts .....                                        | 11  |
| Figure 2-4. GD32F405Vx LQFP100 pinouts .....                                        | 12  |
| Figure 2-5. GD32F405Rx LQFP64 pinouts .....                                         | 12  |
| Figure 2-6. GD32F405xx clock tree .....                                             | 16  |
| Figure 4-1. Recommended power supply decoupling capacitors <sup>(1) (2)</sup> ..... | 62  |
| Figure 4-2. Typical supply current consumption in Run mode .....                    | 68  |
| Figure 4-3. Typical supply current consumption in Sleep mode .....                  | 69  |
| Figure 4-4. Recommended PDR_ON pin circuit .....                                    | 73  |
| Figure 4-5. Recommended external NRST pin circuit <sup>(1)</sup> .....              | 80  |
| Figure 4-6. I/O port AC characteristics definition .....                            | 81  |
| Figure 4-7. I2C bus timing diagram .....                                            | 86  |
| Figure 4-8. SPI timing diagram - master mode .....                                  | 87  |
| Figure 4-9. SPI timing diagram - slave mode .....                                   | 87  |
| Figure 4-10. I2S timing diagram - master mode .....                                 | 89  |
| Figure 4-11. I2S timing diagram - slave mode .....                                  | 89  |
| Figure 4-12. USBFS timings: definition of data signal rise and fall time .....      | 91  |
| Figure 5-1. LQFP144 package outline .....                                           | 94  |
| Figure 5-2. LQFP144 recommended footprint .....                                     | 95  |
| Figure 5-3. BGA100 package outline .....                                            | 96  |
| Figure 5-4. BGA100 recommended footprint .....                                      | 97  |
| Figure 5-5. LQFP100 package outline .....                                           | 98  |
| Figure 5-6. LQFP100 recommended footprint .....                                     | 99  |
| Figure 5-7. LQFP64 package outline .....                                            | 100 |
| Figure 5-8. LQFP64 recommended footprint .....                                      | 101 |

## List of Tables

|                                                                                                        |    |
|--------------------------------------------------------------------------------------------------------|----|
| Table 2-1. GD32F405xx devices features and peripheral list .....                                       | 8  |
| Table 2-2. GD32F405xx memory map .....                                                                 | 13 |
| Table 2-3. GD32F405Zx LQFP144 pin definitions .....                                                    | 17 |
| Table 2-4. GD32F405Vx LQFP100 pin definitions .....                                                    | 25 |
| Table 2-5. GD32F405Vx BGA100 pin definitions.....                                                      | 32 |
| Table 2-6. GD32F405Rx LQFP64 pin definitions .....                                                     | 38 |
| Table 2-7. Port A alternate functions summary .....                                                    | 44 |
| Table 2-8. Port B alternate functions summary .....                                                    | 45 |

## 1. General description

The GD32F405xx device belongs to the connectivity line of GD32 MCU family. It is a new 32-bit general-purpose microcontroller based on the Arm® Cortex®-M4 RISC core with best cost-performance ratio in terms of enhanced processing capacity, reduced power consumption and peripheral set. The Cortex®-M4 core features a Floating Point Unit (FPU) that accelerates single precision floating point math operations and supports all Arm® single precision instructions and data types. It implements a full set of DSP instructions to address digital signal control markets that demand an efficient, easy-to-use blend of control and signal processing capabilities. It also provides a Memory Protection Unit (MPU) and powerful trace technology for enhanced application security and advanced debug support.

The GD32F405xx device incorporates the Arm® Cortex®-M4 32-bit processor core operating at 168 MHz frequency with Flash accesses zero wait states to obtain maximum efficiency. It provides up to 3072 KB on-chip Flash memory and 192 KB SRAM memory. An extensive range of enhanced I/Os and peripherals connected to two APB buses. The devices offer up to three 12-bit 2.6 MSPS ADCs, two 12-bit DACs, up to eight general 16-bit timers, two 16-bit PWM advanced-control timers, two 32-bit general timers, and two 16-bit basic timers, as well as standard and advanced communication interfaces: up to three SPIs, three I2Cs, four USARTs and two UARTs, two I2Ss, two CANs, a SDIO, USBFS and USBHS. Additional peripherals as Digital camera interface (DCI) is included.

The device operates from a 2.6 to 3.6V power supply and available in –40 to +85 °C temperature range. Three power saving modes provide the flexibility for maximum optimization of power consumption, an especially important consideration in low power applications.

The above features make GD32F405xx devices suitable for a wide range of interconnection and advanced applications, especially in areas such as industrial control, consumer and handheld equipment, embedded modules, human machine interface, security and alarm systems, graphic display, automotive navigation, drone, IoT and so on.

## 2. Device overview

### 2.1. Device information

Table 2-1. GD32F405xx devices features and peripheral list

| Part Number  |                        | GD32F405xx                        |                                   |                                   |                                   |                                   |                                   |                                   |                                   |                                   |

## 3. Functional description

### 3.1. Arm® Cortex®-M4 core

The Arm® Cortex®-M4 processor is a high performance embedded processor with DSP instructions which allow efficient signal processing and complex algorithm execution. It brings an efficient, easy-to-use blend of control and signal processing capabilities to meet the digital signal control markets demand. The processor is highly configurable enabling a wide range of implementations from those requiring floating point operations, memory protection and powerful trace technology to cost sensitive devices requiring minimal area, while delivering outstanding computational performance and an advanced system response to interrupts.

32-bit Arm® Cortex®-M4 processor core

- Up to 168 MHz operation frequency
- Single-cycle multiplication and hardware divider
- Floating Point Unit (FPU)
- Integrated DSP instructions
- Integrated Nested Vectored Interrupt Controller (NVIC)
- 24-bit SysTick timer

The Cortex®-M4 processor is based on the Armv7-M architecture and supports both Thumb and Thumb-2 instruction sets. Some system peripherals listed below are also provided by Cortex®-M4:

- Internal Bus Matrix connected with ICode bus, DCode bus, system bus, Private Peripheral Bus (PPB) and debug accesses (AHB-AP)
- Nested Vectored Interrupt Controller (NVIC)
- Flash Patch and Breakpoint (FPB)
- Data Watchpoint and Trace (DWT)
- Instrument Trace Macrocell (ITM)
- Memory Protection Unit (MPU)
- Serial Wire JTAG Debug Port (SWJ-DP)
- Trace Port Interface Unit (TPIU)

### 3.2. On-chip memory

- Up to 3072 Kbytes of Flash memory, including code Flash and data Flash
- The region of the MCU executing instructions without waiting is up to 512K bytes (in case that Flash size equal to 512K, all memory is no waiting time). A long delay when CPU fetches the instructions out of the range.
- 192 KB of SRAM

The Arm® Cortex®-M4 processor is structured in Harvard architecture which can use separate

buses to fetch instructions and load/store data. 3072 Kbytes of inner Flash at most, which includes code Flash and data Flash is available for storing programs and data, and there is no waiting time within code Flash area when CPU executes instructions. Up to 192 Kbytes of inner SRAM is composed of SRAM0 (112KB) and SRAM1 (16KB) that can be accessed at same time, and including 64 KB of TCM (tightly-coupled memory) data RAM that can be accessed only by the data bus of the Cortex®-M4 core. The additional 4KB of backup SRAM (BKP SRAM) is implemented in the backup domain, which can keep its content even when the  $V_{DD}$  power supply is down. [Table 2-2. GD32F405xx memory map](#) shows the memory map of the GD32F405xx series of devices, including Flash, SRAM, peripheral, and other pre-defined regions.

### 3.3. Clock, reset and supply management

- Internal 16 MHz factory-trimmed RC and external 4 to 32 MHz crystal oscillator
- Internal 48 MHz RC oscillator
- Internal 32 KHz RC calibrated oscillator and external 32.768 KHz crystal oscillator
- Integrated system clock PLL
- 2.6 to 3.6 V application supply and I/Os
- Supply Supervisor: POR (Power On Reset), PDR (Power Down Reset), and low voltage detector (LVD)

The Clock Control Unit (CCU) provides a range of oscillator and clock functions. These include internal RC oscillator and external crystal oscillator, high speed and low speed two types. Several prescalers allow the frequency configuration of the AHB and two APB domains. The maximum frequency of the two AHB domains are 168 MHz. The maximum frequency of the two APB domains including APB1 is 42 MHz and APB2 is 84 MHz. See [Figure 2-6. GD32F405xx clock tree](#) for details on the clock tree.

The Reset Control Unit (RCU) controls three kinds of reset: system reset resets the processor core and peripheral IP components. Power-on reset (POR) and power-down reset (PDR) are always active, and ensures proper operation starting from 2.4 V and down to 1.8V. The device remains in reset mode when  $V_{DD}$  is below a specified threshold. The embedded low voltage detector (LVD) monitors the power supply, compares it to the voltage threshold and generates an interrupt as a warning message for leading the MCU into security.

Power supply schemes:

- $V_{DD}$  range: 2.6 to 3.6 V, external power supply for I/Os and the internal regulator. Provided externally through VDD pins.
- $V_{SSA}$ ,  $V_{DDA}$  range: 2.6 to 3.6 V, external analog power supplies for ADC, reset blocks, RCs and PLL. VDDA and VSSA must be connected to VDD and VSS, respectively.
- $V_{BAT}$  range: 1.8 to 3.6 V, power supply for RTC, external clock 32 KHz oscillator and backup registers (through power switch) when  $V_{DD}$  is not present.

### 3.4. Boot modes

At startup, boot pins are used to select one of three boot options:

- Boot from main Flash memory (default)
- Boot from system memory
- Boot from on-chip SRAM

The boot loader is located in the internal 30KB of information blocks for the boot ROM memory (system memory). It is used to reprogram the Flash memory by using USART0 (PA9 and PA10), USART2 (PB10 and PB11, or PC10 and PC11), and USBFS (PA9, PA10, PA11 and PA12) in device mode. It also can be used to transfer and update the Flash memory code, the data and the vector table sections. In default condition, boot from bank0 of Flash memory is selected. It also supports to boot from bank1 of Flash memory by setting a bit in option bytes.

### 3.5. Power saving modes

The MCU supports three kinds of power saving modes to achieve even lower power consumption. They are sleep mode, deep-sleep mode, and standby mode. These operating modes reduce the power consumption and allow the application to achieve the best balance between the CPU operating time, speed and power consumption.

- **Sleep mode**

In sleep mode, only the clock of CPU core is off. All peripherals continue to operate and any interrupt/event can wake up the system.

- **Deep-sleep mode**

In deep-sleep mode, all clocks in the 1.2V domain are off, and all of the high speed crystal oscillator (IRC16M, HXTAL) and PLL are disabled. Only the contents of SRAM and registers are retained. Any interrupt or wakeup event from EXTI lines can wake up the system from the deep-sleep mode including the 16 external lines, the RTC alarm, RTC Tamper and TimeStamp event, the LVD output, RTC wakeup and USB wakeup. When exiting the deep-sleep mode, the IRC16M is selected as the system clock.

- **Standby mode**

In standby mode, the whole 1.2V domain is power off, the LDO is shut down, and all of IRC16M, HXTAL and PLL are disabled. The contents of SRAM and registers (except backup registers) are lost. There are four wakeup sources for the standby mode, including the external reset from NRST pin, the RTC, the FWDGT reset, and the rising edge on WKUP pin.

### 3.6. Analog to digital converter (ADC)

- 12-bit SAR ADC's conversion rate is up to 2.6 MSPS
- 12-bit, 10-bit, 8-bit or 6-bit configurable resolution

- Hardware oversampling ratio adjustable from 2x to 256x improves resolution to 16-bit
- Input voltage range:  $V_{SSA}$  to  $V_{DDA}$  ( $2.6V \leq V_{DDA} \leq 3.6V$ )
- Temperature sensor

Up to three 12-bit 2.6 MSPS multi-channel ADCs are integrated in the device. It has a total of 19 multiplexed channels: 16 external channels, 1 channel for internal temperature sensor ( $V_{SENSE}$ ), 1 channel for internal reference voltage ( $V_{REFINT}$ ) and 1 channel for external battery power supply ( $V_{BAT}$ ). The input voltage range is between 2.6 V and 3.6 V. An on-chip hardware oversampling scheme improves performance while off-loading the related computational burden from the CPU. An analog watchdog block can be used to detect the channels, which are required to remain within a specific threshold window. A configurable channel management block can be used to perform conversions in single, continuous, scan or discontinuous mode to support more advanced use.

The ADC can be triggered from the events generated by the general level 0 timers (TIMERx) and the advanced-control timers (TIMER0 and TIMER7) with internal connection. The temperature sensor can be used to generate a voltage that varies linearly with temperature. It is internally connected to the ADC\_IN16 input channel which is used to convert the sensor output voltage in a digital value.

### 3.7. Digital to analog converter (DAC)

- Two 12-bit DAC converter of independent output channel
- 8-bit or 12-bit mode in conjunction with the DMA controller

The 12-bit buffered DAC channel is used to generate variable analog outputs. The DACs are designed with integrated resistor strings structure. The DAC channels can be triggered by the timer update outputs or EXTI with DMA support. The maximum output value of the DAC is  $V_{REFP}$ .

### 3.8. DMA

- 16 channels DMA controller and each channel are configurable (8 for DMA0 and 8 for DMA1)
- Support independent 8, 16, 32-bit memory and peripheral transfer
- Peripherals supported: Timers, ADC, SPIs, I2Cs, USARTs, UARTs, DAC, I2S, SDIO and DCI

The flexible general-purpose DMA controllers provide a hardware method of transferring data between peripherals and/or memory without intervention from the CPU, thereby freeing up bandwidth for other system functions. Three types of access method are supported: peripheral to memory, memory to peripheral, memory to memory.

Each channel is connected to fixed hardware DMA requests. The priorities of DMA channel requests are determined by software configuration and hardware channel number. Transfer

size of source and destination are independent and configurable.

### 3.9. General-purpose inputs/outputs (GPIOs)

- Up to 114 fast GPIOs, all mappable on 16 external interrupt lines
- Analog input/output configurable
- Alternate function input/output configurable

There are up to 140 general purpose I/O pins (GPIO) in GD32F405xx, named PA0 ~ PA15, PB0 ~ PB15, PC0 ~ PC15, PD0 ~ PD15, PE0 ~ PE15, PF0 ~ PF15, PG0 ~ PG15 and PH0 ~ PH1 to implement logic input/output functions. Each of the GPIO ports has related control and configuration registers to satisfy the requirements of specific applications. The external interrupts on the GPIO pins of the device have related control and configuration registers in the Interrupt/event controller (EXTI). The GPIO ports are pin-shared with other alternative functions (AFs) to obtain maximum flexibility on the package pins. Each of the GPIO pins can be configured by software as output (push-pull or open-drain), as input (with or without pull-up or pull-down) or as peripheral alternate function. Most of the GPIO pins are shared with digital or analog alternate functions. All GPIOs are high-current capable except for analog inputs.

### 3.10. Timers and PWM generation

- Two 16-bit advanced-control timer (TIMER0 & TIMER7), eight 16-bit general timers (TIMER2, TIMER3, TIMER8 ~ TIMER13), two 32-bit general timers (TIMER1 & TIMER4) and two 16-bit basic timer (TIMER5 & TIMER6)
- Up to 4 independent channels of PWM, output compare or input capture for each general timer and external trigger input
- 16-bit, motor control PWM advanced-control timer with programmable dead-time generation for output match
- Encoder interface controller with two inputs using quadrature decoder
- 24-bit SysTick timer down counter
- 2 watchdog timers (free watchdog timer and window watchdog timer)

The advanced-control timer (TIMER0 & TIMER7) can be used as a three-phase PWM multiplexed on 6 channels. It has complementary PWM outputs with programmable dead-time generation. It can also be used as a complete general timer. The 4 independent channels can be used for input capture, output compare, PWM generation (edge- or center-aligned counting modes) and single pulse mode output. If configured as a general 16-bit timer, it has the same functions as the TIMEx timer. It can be synchronized with external signals or to interconnect with other general timers together which have the same architecture and features.

The general timer, can be used for a variety of purposes including general time, input signal pulse width measurement or output waveform generation such as a single pulse generation

or PWM output, up to 4 independent channels for input capture/output compare. TIMER1 & TIMER4 is based on a 32-bit auto-reload up/downcounter and a 16-bit prescaler. TIMER2 & TIMER3 is based on a 16-bit auto-reload up/downcounter and a 16-bit prescaler. TIMER8 ~ TIMER13 is based on a 16-bit auto-reload upcounter and a 16-bit prescaler. The general timer also supports an encoder interface with two inputs using quadrature decoder.

The basic timer, known as TIMER5 & TIMER6, are mainly used for DAC trigger generation. They can also be used as a simple 16-bit time base.

The GD32F405xx have two watchdog peripherals, free watchdog timer and window watchdog timer. They offer a combination of high safety level, flexibility of use and timing accuracy.

The free watchdog timer includes a 12-bit down-counting counter and an 8-bit prescaler. It is clocked from an independent 32 KHz internal RC and as it operates independently of the main clock, it can operate in deep-sleep and standby modes. It can be used either as a watchdog to reset the device when a problem occurs, or as a free-running timer for application timeout management.

The window watchdog timer is based on a 7-bit down counter that can be set as free-running. It can be used as a watchdog to reset the device when a problem occurs. It is clocked from the main clock. It has an early wakeup interrupt capability and the counter can be frozen in debug mode.

The SysTick timer is dedicated for OS, but could also be used as a standard down counter. It features:

- A 24-bit down counter
- Auto reload capability
- Maskable system interrupt generation when the counter reaches 0
- Programmable clock source

### 3.11. Real time clock (RTC) and backup registers

- Independent binary-coded decimal (BCD) format timer/counter with twenty 32-bit backup registers.
- Calendar with sub-second, seconds, minutes, hours, week day, date, year and month automatically correction
- Alarm function with wake up from deep-sleep and standby mode capability
- On-the-fly correction for synchronization with master clock. Digital calibration with 1 ppm resolution for compensation of quartz crystal inaccuracy.

The real time clock is an independent timer which provides a set of continuously running counters in backup registers to provide a real calendar function, and provides an alarm interrupt or an expected interrupt. It is not reset by a system or power reset, or when the device wakes up from standby mode. A prescaler is used for the time base clock and is by default configured to generate a time base of 1 second from a clock at 32.768 KHz from external crystal oscillator.

### 3.12. Inter-integrated circuit (I2C)

- Up to three I2C bus interfaces can support both master and slave mode with a frequency up to 400 KHz (Fast mode)
- Provide arbitration function, optional PEC (packet error checking) generation and checking
- Supports 7-bit and 10-bit addressing mode and general call addressing mode

The I2C interface is an internal circuit allowing communication with an external I2C interface which is an industry standard two line serial interface used for connection to external hardware. These two serial lines are known as a serial data line (SDA) and a serial clock line (SCL). The I2C module provides two data transfer rates: 100 KHz of standard mode or 400 KHz of the fast mode. The I2C module also has an arbitration detect function to prevent the situation where more than one master attempts to transmit data to the I2C bus at the same time. A CRC-8 calculator is also provided in I2C interface to perform packet error checking for I2C data.

### 3.13. Serial peripheral interface (SPI)

- Up to three SPI interfaces with a frequency of up to 30 MHz
- Support both master and slave mode
- Hardware CRC calculation and transmit automatic CRC error checking

The SPI interface uses 4 pins, among which are the serial data input and output lines (MISO & MOSI), the clock line (SCK) and the slave select line (NSS). Both SPIs can be served by the DMA controller. The SPI interface may be used for a variety of purposes, including simplex synchronous transfers on two lines with a possible bidirectional data line or reliable communication using CRC checking.

### 3.14. Universal synchronous/asynchronous receiver transmitter (USART/UART)

- Up to four USARTs and two UARTs with operating speed up to 10.5 Mbit/s
- Supports both asynchronous and clocked synchronous serial communication modes
- IrDA SIR encoder and decoder support
- LIN break generation and detection
- ISO 7816-3 compliant smart card interface

The USART (USART0, USART1, USART2, USART5) and UART (UART3, UART4) are used to transfer data between parallel and serial interfaces, provides a flexible full duplex data exchange using synchronous or asynchronous transfer. It is also commonly used for RS-232 standard communication. The USART/UART includes a programmable baud rate generator

which is capable of dividing the system clock to produce a dedicated clock for the USART/UART transmitter and receiver. The USART/UART also supports DMA function for high speed data communication.

### 3.15. Inter-IC sound (I2S)

- Two I2S bus Interfaces with sampling frequency from 8 KHz to 192 KHz, multiplexed with SPI1 and SPI2
- Support either master or slave mode Audio
- Sampling frequencies from 8 KHz up to 192 KHz are supported

The Inter-IC sound (I2S) bus provides a standard communication interface for digital audio applications by 4-wire serial lines. GD32F405xx contain an I2S-bus interface that can be operated with 16/32 bit resolution in master or slave mode, pin multiplexed with SPI1 and SPI2. The audio sampling frequencies from 8 KHz to 192 KHz is supported.

### 3.16. Universal serial bus full-speed interface (USBFS)

- One USB device/host/OTG full-speed Interface with frequency up to 12 Mbit/s
- Internal 48 MHz oscillator support crystal-less operation
- Internal main PLL for USB CLK compliantly
- Internal USBFS PHY support

The Universal Serial Bus (USB) is a 4-wire bus with 4 bidirectional endpoints. The device controller enables 12 Mbit/s data exchange with integrated transceivers. Transaction formatting is performed by the hardware, including CRC generation and checking. It supports both host and device modes, as well as OTG mode with Host Negotiation Protocol (HNP) and Session Request Protocol (SRP). The controller contains a full-speed USB PHY internal. For full-speed or low-speed operation, no more external PHY chip is needed. It supports all the four types of transfer (control, bulk, Interrupt and isochronous) defined in USB 2.0 protocol. The required precise 48 MHz clock which can be generated from the internal main PLL (the clock source must use an HXTAL crystal oscillator) or by the internal 48 MHz oscillator in automatic trimming mode that allows crystal-less operation.

### 3.17. Universal serial bus high-speed interface (USBHS)

- One USB device/host/OTG high-speed Interface with frequency up to 480 Mbit/s
- An external PHY device connected to the ULPI is required when using in HS mode

USBHS supports both host and device modes, as well as OTG mode with Host Negotiation Protocol (HNP) and Session Request Protocol (SRP). The controller provides ULPI interface for external USB PHY integration and it also contains a full-speed USB PHY internal. For full-speed or low-speed operation, no more external PHY chip is needed. It supports all the four

types of transfer (control, bulk, Interrupt and isochronous) defined in USB 2.0 protocol. HUB connection is supported when USBHS operates at high-speed in host mode. There is also a DMA engine operating as an AHB bus master in USBHS to speed up the data transfer between USBHS and system.

### 3.18. Controller area network (CAN)

- Two CAN2.0B interface with communication frequency up to 1 Mbit/s
- Internal main PLL for CAN CLK compliantly

Controller area network (CAN) is a method for enabling serial communication in field bus. The CAN protocol has been used extensively in industrial automation and automotive applications. It can receive and transmit standard frames with 11-bit identifiers as well as extended frames with 29-bit identifiers. Each CAN has three mailboxes for transmission and two FIFOs of three message deep for reception. It also provides 28 scalable/configurable identifier filter banks for selecting the incoming messages needed and discarding the others.

### 3.19. Secure digital input and output card interface (SDIO)

- Support SD2.0/SDIO2.0/MMC4.2 host interface

The Secure Digital Input and Output Card Interface (SDIO) provides access to external SD memory cards specifications version 2.0, SDIO card specification version 2.0 and multi-media card system specification version 4.2 with DMA supported. In addition, this interface is also compliant with CE-ATA digital protocol rev1.1.

### 3.20. Digital camera interface (DCI)

- Digital video/picture capture
- 8/10/12/14 data width supported
- High transfer efficiency with DMA interface
- Video/picture crop supported
- Various pixel formats supported including JPEG/YCrCb/RGB
- Hard/embedded synchronous signals supported

DCI is an 8-bit to 14-bit parallel interface that able to capture video or picture from a camera via Digital Camera Interface. It supports 8/10/12/14 bits data width through DMA operation.

### 3.21. Debug mode

- Serial wire JTAG debug port (SWJ-DP)

The Arm® SWJ-DP Interface is embedded and is a combined JTAG and serial wire debug

port that enables either a serial wire debug or a JTAG probe to be connected to the target.

### 3.22. Package and operation temperature

- BGA100 (GDF405VxH), LQFP144 (GD32F405Zx), LQFP100 (GD32F405Vx) and LQFP64 (GD32F405Rx)
- Operation temperature range: -40°C to +85°C (industrial level)

## 4. Electrical characteristics

### 4.1. Absolute maximum ratings

The maximum ratings are the limits to which the device can be subjected without permanently damaging the device. Note that the device is not guaranteed to operate properly at the maximum ratings. Exposure to the absolute maximum rating conditions for extended periods may affect device reliability.

**Table 4-1. Absolute maximum ratings<sup>(1)(4)</sup>**

| Symbol                             | Parameter                                             | Min                    | Max                    | Unit |
|------------------------------------|-------------------------------------------------------|------------------------|------------------------|------|
| V <sub>DD</sub>                    | External voltage range <sup>(2)</sup>                 | V <sub>SS</sub> - 0.3  | V <sub>SS</sub> + 3.6  | V    |
| V <sub>DDA</sub>                   | External analog supply voltage                        | V <sub>SSA</sub> - 0.3 | V <sub>SSA</sub> + 3.6 | V    |
| V <sub>BAT</sub>                   | External battery supply voltage                       | V <sub>SS</sub> - 0.3  | V <sub>SS</sub> + 3.6  | V    |
| V <sub>IN</sub>                    | Input voltage on 5V tolerant pin <sup>(3)</sup>       | V <sub>SS</sub> - 0.3  | V <sub>DD</sub> + 3.6  | V    |
|                                    | Input voltage on other I/O                            | V <sub>SS</sub> - 0.3  | 3.6                    | V    |
| ΔV <sub>DDX</sub>                  | Variations between different VDD power pins           | —                      | 50                     | mV   |
| V <sub>SSX</sub> - V <sub>SS</sub> | Variations between different ground pins              | —                      | 50                     | mV   |
| I <sub>IO</sub>                    | Maximum current for GPIO pins                         | —                      | 25                     | mA   |
| T <sub>A</sub>                     | Operating temperature range                           | -40                    | +85                    | °C   |
| P <sub>D</sub>                     | Power dissipation at T <sub>A</sub> = 85°C of LQFP144 | —                      | 820                    | mW   |
|                                    | Power dissipation at T <sub>A</sub> = 85°C of BGA100  | —                      | 511                    |      |
|                                    | Power dissipation at T <sub>A</sub> = 85°C of LQFP100 | —                      | 697                    |      |
|                                    | Power dissipation at T <sub>A</sub> = 85°C of LQFP64  | —                      | 772                    |      |
| T <sub>STG</sub>                   | Storage temperature range                             | -65                    | +150                   | °C   |
| T <sub>J</sub>                     | Maximum junction temperature                          | —                      | 125                    | °C   |

(1) Guaranteed by design, not tested in production.

(2) All main power and ground pins should be connected to an external power source within the allowable range.

(3) V<sub>IN</sub> maximum value cannot exceed 5.5 V.

(4) It is recommended that V<sub>DD</sub> and V<sub>DDA</sub> are powered by the same source. The maximum difference between V<sub>DD</sub> and V<sub>DDA</sub> does not exceed 300 mV during power-up and operation.

### 4.2. Operating conditions characteristics

**Table 4-2. DC operating conditions**

| Symbol           | Parameter              | Conditions              | Min <sup>(1)</sup> | Typ | Max <sup>(1)</sup> | Unit |
|------------------|------------------------|-------------------------|--------------------|-----|--------------------|------|
| V <sub>DD</sub>  | Supply voltage         | —                       | 2.6                | 3.3 | 3.6                | V    |
| V <sub>DDA</sub> | Analog supply voltage  | Same as V <sub>DD</sub> | 2.6                | 3.3 | 3.6                | V    |
| V <sub>BAT</sub> | Battery supply voltage | —                       | 1.8 <sup>(2)</sup> | —   | 3.6                | V    |

(1) Based on characterization, not tested in production.

(2) In the application which V<sub>BAT</sub> supply the backup domains, if the V<sub>BAT</sub> voltage drops below the minimum value, when V<sub>DD</sub> is powered on again, it is necessary to refresh the registers of backup domains and enable LXTAL again.

**Figure 4-1. Recommended power supply decoupling capacitors<sup>(1) (2)</sup>**

- (1) The VREFP and VREFN pins are only available on no less than 100-pin packages, or else the VREFP and VREFN pins are not available and internally connected to VDDA and VSSA pins. More details refer to **AN056 GD32F4xx Hardware Development Guide**.
- (2) All decoupling capacitors need to be as close as possible to the pins on the PCB board.

**Table 4-3. Clock frequency<sup>(1)</sup>**

| Symbol     | Parameter            | Conditions | Min | Max | Unit |
|------------|----------------------|------------|-----|-----|------|
| $f_{HCLK}$ | AHB clock frequency  | —          | —   | 168 | MHz  |
| $f_{APB1}$ | APB1 clock frequency | —          | —   | 42  | MHz  |
| $f_{APB2}$ | APB2 clock frequency | —          | —   | 84  | MHz  |

- (1) Guaranteed by design, not tested in production.

**Table 4-4. Operating conditions at Power up / Power down<sup>(1)</sup>**

| Symbol    | Parameter               | Conditions | Min | Max      | Unit      |
|-----------|-------------------------|------------|-----|----------|-----------|
| $t_{VDD}$ | $V_{DD}$ rise time rate | —          | 0   | $\infty$ | $\mu s/V$ |
|           | $V_{DD}$ fall time rate |            | 20  | $\infty$ |           |

- (1) Guaranteed by design, not tested in production.

**Table 4-5. Start-up timings of Operating conditions<sup>(1)(2)(3)</sup>**

| Symbol         | Parameter     | Conditions               | Typ | Unit |
|----------------|---------------|--------------------------|-----|------|
| $t_{start-up}$ | Start-up time | Clock source from HXTAL  | 143 | ms   |
|                |               | Clock source from IRC16M | 143 |      |

- (1) Based on characterization, not tested in production.
- (2) After power-up, the start-up time is the time between the rising edge of NRST high and the main function.
- (3) PLL is off.

**Table 4-6. Power saving mode wakeup timings characteristics<sup>(1)(2)</sup>**

| Symbol           | Parameter                                           | Typ | Unit    |
|------------------|-----------------------------------------------------|-----|---------|
| $t_{Sleep}$      | Wakeup from Sleep mode                              | 1.5 | $\mu s$ |
| $t_{Deep-sleep}$ | Wakeup from Deep-sleep mode (LDO On)                | 3.3 |         |
|                  | Wakeup from Deep-sleep mode (LDO in low power mode) | 3.3 |         |
| $t_{Standby}$    | Wakeup from Standby mode                            | 143 | ms      |

(1) Based on characterization, not tested in production.

(2) The wakeup time is measured from the wakeup event to the point at which the application code reads the first instruction under the below conditions:  $V_{DD} = V_{DDA} = 3.3 V$ , IRC16M = System clock = 16 MHz.

## 4.3. Power consumption

The power measurements specified in the tables represent that code with data executing from on-chip Flash with the following specifications.

**Table 4-7. Power consumption characteristics<sup>(2)(3)(4)(5)(6)</sup>**

| Symbol             | Parameter                 | Conditions                                                                                    | Min | Typ <sup>(1)</sup> | Max | Unit |

- (1) Based on characterization, not tested in production.
- (2) Unless otherwise specified, all values given for T<sub>A</sub> = 25 °C and test result is mean value.
- (3) When System Clock is less than 4 MHz, an external source is used, and the HXTAL bypass function is needed, no PLL.
- (4) When System Clock is greater than 8 MHz, a crystal 8 MHz is used, and the HXTAL bypass function is closed, using PLL.
- (5) When analog peripheral blocks such as ADCs, DACs, HXTAL, LXTAL, IRC16M, or IRC32K are ON, an additional power consumption should be considered.
- (6) All GPIOs are configured as analog mode except standby mode.

(1) Based on characterization, not tested in production.

(2) DEN0 and DEN1 bits in the DAC\_CTL register are set to 1, and the converted value set to 0x800.

(3) Enable SPIx CLKEN, I2SSEL bit and I2SEN bit set to 1 in SPI\_I2SCTL.

- (4) System clock =  $f_{HCLK} = 168 \text{ MHz}$ ,  $f_{APB1} = f_{HCLK}/4$ ,  $f_{APB2} = f_{HCLK}/2$ ,  $f_{ADCCCLK} = f_{APB2}/4$ , ADON bit is set to 1.
- (5) If there is no other description, then  $V_{DD} = V_{DDA} = 3.3 \text{ V}$ ,  $HXTAL = 25 \text{ MHz}$ , system clock =  $f_{HCLK} = 168 \text{ MHz}$ ,  $f_{APB1} = f_{HCLK}/4$ ,  $f_{APB2} = f_{HCLK}/2$ .

## 4.4. EMC characteristics

EMS (electromagnetic susceptibility) includes ESD (Electrostatic discharge, positive and negative) and FTB (Burst of Fast Transient voltage, positive and negative) testing result is given in [Table 4-9. EMS characteristics](#), based on the EMS levels and classes compliant with IEC 61000 series standard.

**Table 4-9. EMS characteristics<sup>(1)</sup>**

| Symbol    | Parameter                                                                                                  | Conditions                                                                                                                           | Level/Class |
|-----------|------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|-------------|
| $V_{ESD}$ | Voltage applied to all device pins to induce a functional disturbance                                      | $V_{DD} = 3.3 \text{ V}$ , $T_A = 25 \text{ }^{\circ}\text{C}$<br>LQFP144, $f_{HCLK} = 168 \text{ MHz}$<br>conforms to IEC 61000-4-2 | 3A          |
| $V_{FTB}$ | Fast transient voltage burst applied to induce a functional disturbance through 100 pF on VDD and VSS pins | $V_{DD} = 3.3 \text{ V}$ , $T_A = 25 \text{ }^{\circ}\text{C}$<br>LQFP144, $f_{HCLK} = 168 \text{ MHz}$<br>conforms to IEC 61000-4-4 | 3A          |

(1) Based on characterization, not tested in production.

EMI (Electromagnetic Interference) emission test result is given in the [Table 4-10. EMI characteristics<sup>\(1\)</sup>](#), The electromagnetic field emitted by the device are monitored while an application, executing EEMBC code, is running. The test is compliant with SAE J1752-3:2017 standard which specifies the test board and the pin loading.

**Table 4-10. EMI characteristics<sup>(1)</sup>**

| Symbol    | Parameter  | Conditions                                                                                                                                | Tested frequency band | Max vs. $[f_{HXTAL}/f_{HCLK}]$ | Unit       |

(1) Based on characterization, not tested in production.

(2) Guaranteed by design, not tested in production.

Figure 4-4. Recommended PDR\_ON pin circuit

- (1) The PDR supervisor can be enabled/disabled through PDR\_ON pin.
- (2) When PDR\_ON pin is connected to VSS (Internal Reset OFF), the VBAT functionality is no more available and VBAT pin should be connected to VDD.

## 4.6. Electrical sensitivity

The device is strained in order to determine its performance in terms of electrical sensitivity. Electrostatic discharges (ESD) are applied directly to the pins of the sample. Static latch-up (LU) test is based on the two measurement methods.

Table 4-12. ESD characteristics<sup>(1)</sup>

| Symbol         | Parameter                                             | Conditions                                        | Min | Typ | Max  | Unit |
|----------------|-------------------------------------------------------|---------------------------------------------------|-----|-----|------|------|
| $V_{ESD(HBM)}$ | Electrostatic discharge voltage (human body model)    | $T_A=25\text{ }^{\circ}\text{C}$ ;<br>JS-001-2014 | —   | —   | 7000 | V    |
| $V_{ESD(CDM)}$ | Electrostatic discharge voltage (charge device model) | $T_A=25\text{ }^{\circ}\text{C}$ ;<br>JS-002-2014 | —   | —   | 800  | V    |

- (1) Based on characterization, not tested in production.

Table 4-13. Static latch-up characteristics<sup>(1)</sup>

| Symbol | Parameter                        | Conditions                                | Min | Typ | Max  | Unit |
|--------|----------------------------------|-------------------------------------------|-----|-----|------|------|
| LU     | I-test                           | $T_A=25\text{ }^{\circ}\text{C}$ ; JESD78 | —   | —   | ±200 | mA   |
|        | $V_{\text{supply}}$ over voltage |                                           | —   | —   | 5.4  | V    |

- (1) Based on characterization, not tested in production.

## 4.7. External clock characteristics

Table 4-14. High speed external clock (HXTAL) generated from a crystal/ceramic

## characteristics

| Symbol                               | Parameter                                            | Conditions                                                                               | Min | Typ | Max | Unit       |
|--------------------------------------|------------------------------------------------------|------------------------------------------------------------------------------------------|-----|-----|-----|------------|
| $f_{\text{HXTAL}}^{(1)}$             | Crystal or ceramic frequency                         | $2.6 \text{ V} \leq V_{\text{DD}} \leq 3.6 \text{ V}$                                    | 4   | 8   | 32  | MHz        |
| $R_{\text{F}}^{(2)}$                 | Feedback resistor                                    | $V_{\text{DD}} = 3.3 \text{ V}$                                                          | —   | 400 | —   | k $\Omega$ |
| $C_{\text{HXTAL}}^{(2)(3)}$          | Recommended matching capacitance on OSCIN and OSCOUT | —                                                                                        | —   | 20  | 30  | pF         |
| $\text{Ducy}_{(\text{HXTAL})}^{(2)}$ | Crystal or ceramic duty cycle                        | —                                                                                        | 30  | 50  | 70  | %          |
| $g_{\text{m}}^{(2)}$                 | Oscillator transconductance                          | Startup                                                                                  | —   | 25  | —   | mA/V       |
| $I_{\text{DDHXTAL}}^{(1)}$           | Crystal or ceramic operating current                 | $V_{\text{DD}} = 3.3 \text{ V}$ , $f_{\text{HCLK}} = f_{\text{IRC16M}} = 16 \text{ MHz}$ | —   | 1   | —   | mA         |
| $t_{\text{SUHXTAL}}^{(1)}$           | Crystal or ceramic startup time                      | $V_{\text{DD}} = 3.3 \text{ V}$ , $f_{\text{HCLK}} = f_{\text{IRC16M}} = 16 \text{ MHz}$ | —   | 1.8 | —   | ms         |

(1) Based on characterization, not tested in production.

(2) Guaranteed by design, not tested in production.

(3)  $C_{\text{HXTAL1}} = C_{\text{HXTAL2}} = 2 \times (C_{\text{LOAD}} - C_{\text{S}})$ , For  $C_{\text{HXTAL1}}$  and  $C_{\text{HXTAL2}}$ , it is recommended matching capacitance on OSCIN and OSCOUT. For  $C_{\text{LOAD}}$ , it is crystal/ceramic load capacitance, provided by the crystal or ceramic manufacturer. For  $C_{\text{S}}$ , it is PCB and MCU pin stray capacitance.

**Table 4-15. High speed external clock characteristics (HXTAL in bypass mode)**

| Symbol                               | Parameter                                     | Conditions                                            | Min                 | Typ | Max                 | Unit |
|--------------------------------------|-----------------------------------------------|-------------------------------------------------------|---------------------|-----|---------------------|------|

(1) Based on characterization, not tested in production.

(2) Guaranteed by design, not tested in production.

(3)  $C_{LXTAL1} = C_{LXTAL2} = 2 * (C_{LOAD} - C_S)$ , For  $C_{LXTAL1}$  and  $C_{LXTAL2}$ , it is recommended matching capacitance on OSC32IN and OSC32OUT. For  $C_{LOAD}$ , it is crystal/ceramic load capacitance, provided by the crystal or ceramic manufacturer. For  $C_S$ , it is PCB and MCU pin stray capacitance.

(4)  $t_{SULXTAL}$  is the startup time measured from the moment it is enabled (by software) to the 32.768 kHz oscillator stabilization flags is SET. This value varies significantly with the crystal manufacturer.

|                       |                                         | VCO freq = 500 MHz | —   | 100  | 300 |         |
| $I_{DDA}^{(1)(3)}$    | Current consumption on $V_{DDA}$        | VCO freq = 500 MHz | —   | 1100 | —   | $\mu A$ |
| Jitter <sub>PLL</sub> | Cycle to cycle Jitter(rms)              | System clock       | —   | 40   | —   | ps      |
|                       | Cycle to cycle Jitter<br>(peak to peak) |                    | —   | 400  | —   |         |

(1) Based on characterization, not tested in production.

(2) Guaranteed by design, not tested in production.

(3) System clock = IRC16M = 16 MHz, PLL clock source = IRC16M/2 = 8 MHz,  $f_{PLLOUT}$  = 168 MHz.

(4) Value given with main PLLSAI running.

Table 4-24. PLL spread spectrum clock generation (SSCG) characteristics

| Symbol             | Parameter                 | Conditions | Min | Typ | Max        | Unit |
|--------------------|---------------------------|------------|-----|-----|------------|------|
| $f_{mod}$          | Modulation frequency      | —          | —   | —   | 10         | KHz  |
| mdamp              | Peak modulation amplitude | —          | —   | —   | 2          | %    |
| MODCNT*<br>MODSTEP | —                         | —          | —   | —   | $2^{15}-1$ | —    |

- (1) Based on characterization, not tested in production.  
 (2) Guaranteed by design, not tested in production.

**Equation 1:** SSCG configuration equation:

$$\text{MODCNT} = \text{round}(f_{\text{PLLIN}}/4/f_{\text{mod}})$$

$$\text{MODSTEP} = \text{round}(\text{mdamp} * \text{PLLN} * 2^{14}/(\text{MODCNT} * 100))$$

The formula above (Equation 1) is SSCG configuration equation.

## 4.10. Memory characteristics

**Table 4-25. Flash memory characteristics<sup>(1)</sup>**

| Symbol                    | Parameter                                                             | Conditions                       | Min | Typ  | Max  | Unit    |
|---------------------------|-----------------------------------------------------------------------|----------------------------------|-----|------|------|---------|

- (1) Based on characterization, not tested in production.
- (2) Guaranteed by design, not tested in production.
- (3) All pins except PC13 / PC14 / PC15 / PI8. Since PC13 to PC15 and PI8 are supplied through the Power Switch, which can only be obtained by a small current( typical source capability:3mA shared between these IOs, but sink capability is same as other IO) , the speed of GPIOs PC13 to PC15 and PI8 should not exceed 2 MHz when they are in output mode(maximum load: 30 pF).

**Table 4-28. I/O port AC characteristics<sup>(1)(2)</sup>**

| GPIOx_OSPD[1:0] bit value <sup>(3)</sup>             | Parameter                        | Conditions                                                | Max | Unit |
|------------------------------------------------------|----------------------------------|-----------------------------------------------------------|-----|------|

- (1) Based on characterization, not tested in production.
- (2) Unless otherwise specified, all test results given for  $T_A = 25^\circ\text{C}$ .
- (3) The I/O speed is configured using the GPIOx\_OSPD->OSPDy[1:0] bits. Refer to the GD32F4xx user manual which is selected to set the GPIO port output speed.
- (4) The maximum frequency is defined in Figure 4-6, and maximum frequency cannot exceed 168 MHz.

**Figure 4-6. I/O port AC characteristics definition**

## 4.13. ADC characteristics

Table 4-29. ADC characteristics

| Symbol                           | Parameter                                       | Conditions                      | Min   | Typ              | Max               | Unit                   |

(1) Based on characterization, not tested in production.

(2) Guaranteed by design, not tested in production.

**Equation 2:** R<sub>AIN</sub> max formula 
$$R_{AIN} < \frac{T_s}{f_{ADC} \cdot C_{ADC} \cdot \ln(2^{N+2})} - R_{ADC}$$

The formula above (Equation 2) is used to determine the maximum external impedance allowed for an error below 1/4 of LSB. Here N = 12 (from 12-bit resolution).

Table 4-30. ADC RAIN max for f<sub>ADC</sub> = 40 MHz<sup>(2)</sup>

| T <sub>s</sub> (cycles) | t <sub>s</sub> (us) | R <sub>AIN</sub> max (KΩ) |
|-------------------------|---------------------|---------------------------|
| 3                       | 0.075               | 0.85                      |
| 15                      | 0.375               | 6.5                       |

| DNL    | Differential linearity error | $V_{DDA} = V_{REFP} = 3.3 \text{ V}$ | ±0.9 | ±1.2 |      |
| INL    | Integral linearity error     |                                      | ±1.1 | ±1.5 |      |

(1) Based on characterization, not tested in production.

(2) Guaranteed by design, not tested in production.

## 4.14. Temperature sensor characteristics

**Table 4-36. Temperature sensor characteristics<sup>(1)</sup>**

| Symbol                             | Parameter                                      | Min | Typ  | Max | Unit  |
|------------------------------------|------------------------------------------------|-----|------|-----|-------|
| T <sub>L</sub>                     | V <sub>SENSE</sub> linearity with temperature  | —   | ±1.5 | —   | °C    |
| Avg_Slope                          | Average slope                                  | —   | 4.1  | —   | mV/°C |
| V <sub>25</sub>                    | Voltage at 25 °C                               | —   | 1.45 | —   | V     |
| t <sub>S_temp</sub> <sup>(2)</sup> | ADC sampling time when reading the temperature | —   | 17.1 | —   | μs    |

(1) Based on characterization, not tested in production.

(2) Shortest sampling time can be determined in the application by multiple iterations.

## 4.15. DAC characteristics

**Table 4-37. DAC characteristics**

| Symbol                                | Parameter                                 | Conditions                                                               | Min | Typ              | Max                     | Unit |
|---------------------------------------|-------------------------------------------|--------------------------------------------------------------------------|-----|------------------|-------------------------|------|
| V <sub>DDA</sub> <sup>(1)</sup>       | Operating voltage                         | —                                                                        | 2.6 | 3.3              | 3.6                     | V    |
| V <sub>REFP</sub> <sup>(2)</sup>      | Positive Reference Voltage                | —                                                                        | 2.6 | —                | V <sub>DDA</sub>        | V    |
| V <sub>REFN</sub> <sup>(2)</sup>      | Negative Reference Voltage                | —                                                                        | —   | V <sub>SSA</sub> | —                       | V    |
| R <sub>LOAD</sub> <sup>(2)</sup>      | Resistive load                            | Resistive load with buffer ON                                            | 5   | —                | —                       | kΩ   |
| R <sub>o</sub> <sup>(2)</sup>         | Impedance output                          | Impedance output with buffer OFF                                         | —   | —                | 15                      | kΩ   |
| C <sub>LOAD</sub> <sup>(2)</sup>      | Capacitive load                           | Capacitive load with buffer ON                                           | —   | —                | 50                      | pF   |
| DAC_OUT <sub>min</sub> <sup>(2)</sup> | Lower DAC_OUT voltage                     | Lower DAC_OUT voltage with buffer ON                                     | 0.2 | —                | —                       | V    |
|                                       |                                           | Lower DAC_OUT voltage with buffer OFF                                    | 0.5 | —                | —                       | mV   |
| DAC_OUT <sub>max</sub> <sup>(2)</sup> | Higher DAC_OUT voltage                    | Higher DAC_OUT voltage with buffer ON                                    | —   | —                | V <sub>DDA</sub> - 0.2  | V    |
|                                       |                                           | Higher DAC_OUT voltage with buffer OFF                                   | —   | —                | V <sub>DDA</sub> - 1LSB | V    |
| I <sub>DDA</sub> <sup>(1)</sup>       | DAC current consumption in quiescent mode | With no load, middle code(0x800) on the input, V <sub>REFP</sub> = 3.6 V | —   | —                | 500                     | μA   |
|                                       |                                           | With no load, worst code(0xF1C) on the input, V <sub>REFP</sub> = 3.6 V  | —   | —                | 560                     |      |
| I <sub>DDVREFP</sub> <sup>(1)</sup>   | DAC current consumption in quiescent mode | With no load, middle code(0x800) on the input, V <sub>REFP</sub> = 3.6 V | —   | 86               | —                       | μA   |

| Offset <sup>(1)</sup>      | Offset error                                                                  | DAC in 12-bit mode                                                            | — | —         | $\pm 12$  | LSB           |
| GE <sup>(1)</sup>          | Gain error                                                                    | DAC in 12-bit mode                                                            | — | $\pm 0.5$ | —         | %             |
| $T_{\text{setting}}^{(1)}$ | Settling time                                                                 | $C_{\text{LOAD}} \leq 50\text{ pF}$ , $R_{\text{LOAD}} \geq 5\text{ k}\Omega$ | — | 0.5       | 1         | $\mu\text{s}$ |
| $T_{\text{wakeup}}^{(2)}$  | Wakeup from off state                                                         | —                                                                             | — | 5         | 10        | $\mu\text{s}$ |
| Update rate <sup>(2)</sup> | Max frequency for a correct DAC_OUT change from code i to $i \pm 1\text{LSB}$ | $C_{\text{LOAD}} \leq 50\text{ pF}$ , $R_{\text{LOAD}} \geq 5\text{ k}\Omega$ | — | —         | 4         | MS/s          |
| PSRR <sup>(2)</sup>        | Power supply rejection ratio(to $V_{\text{DDA}}$ )                            | No $R_{\text{Load}}$ , $C_{\text{LOAD}}=50\text{ pF}$                         | — | -90       | -75       | dB            |

(1) Based on characterization, not tested in production.

(2) Guaranteed by design, not tested in production.

## 4.16. I2C characteristics

**Table 4-38. I2C characteristics<sup>(1)(2)</sup>**

| Symbol                  | Parameter                               | Conditions | Standard mode    |      | Fast mode |     | Unit          |
|-------------------------|-----------------------------------------|------------|------------------|------|-----------|-----|---------------|
|                         |                                         |            | Min              | Max  | Min       | Max |               |
| $t_{\text{SCL(H)}}$     | SCL clock high time                     | —          | 4.0              | —    | 0.6       | —   | $\mu\text{s}$ |
| $t_{\text{SCL(L)}}$     | SCL clock low time                      | —          | 4.7              | —    | 1.3       | —   | $\mu\text{s}$ |
| $t_{\text{SU(SDA)}}$    | SDA setup time                          | —          | 250              | —    | 100       | —   | ns            |
| $t_{\text{H(SDA)}}$     | SDA data hold time                      | —          | 0 <sup>(3)</sup> | 3450 | 0         | 900 | ns            |
| $t_{\text{r(SDA/SCL)}}$ | SDA and SCL rise time                   | —          | —                | 1000 | —         | 300 | ns            |
| $t_{\text{f(SDA/SCL)}}$ | SDA and SCL fall time                   | —          | —                | 300  | —         | 300 | ns            |
| $t_{\text{H(STA)}}$     | Start condition hold time               | —          | 4.0              | —    | 0.6       | —   | $\mu\text{s}$ |
| $t_{\text{SU(STA)}}$    | Repeated Start condition setup time     | —          | 4.7              | —    | 0.6       | —   | $\mu\text{s}$ |
| $t_{\text{SU(STO)}}$    | Stop condition setup time               | —          | 4.0              | —    | 0.6       | —   | $\mu\text{s}$ |
| $t_{\text{buff}}$       | Stop to Start condition time (bus free) | —          | 4.7              | —    | 1.3       | —   | $\mu\text{s}$ |

(1) Guaranteed by design, not tested in production.

(2) To ensure the standard mode I2C frequency,  $f_{\text{PCLK1}}$  must be at least 2 MHz. To ensure the fast mode I2C frequency,  $f_{\text{PCLK1}}$  must be at least 4 MHz.

(3) The device should provide a data hold time of 300 ns at least in order to bridge the undefined region of the falling edge of SCL.

(Original dimensions are in millimeters)

Technical drawing of a rectangular plate with dimensions and hole locations. The overall dimensions are 12.70 (width) and 12.70 (height). The central rectangular area has dimensions 10.30 (width) and 7.80 (height). The plate features a series of holes along its perimeter, numbered 1 through 49. The holes are arranged in a grid pattern, with 16 holes along the left edge, 17 holes along the bottom edge, 16 holes along the right edge, and 6 holes along the top edge. The distance between the centerlines of adjacent holes is 0.50. The distance from the centerline of the first hole to the centerline of the last hole is 10.30. The distance from the centerline of the first hole to the centerline of the last hole is 12.70. The distance from the centerline of the first hole to the centerline of the last hole is 12.70. The distance from the centerline of the first hole to the centerline of the last hole is 12.70.

## 5.5. Thermal characteristics

Thermal resistance is used to characterize the thermal performance of the package device, which is represented by the Greek letter “ $\theta$ ”. For semiconductor devices, thermal resistance represents the steady-state temperature rise of the chip junction due to the heat dissipated on the chip surface.

$\theta_{JA}$ : Thermal resistance, junction-to-ambient.

$\theta_{JB}$ : Thermal resistance, junction-to-board.

$\theta_{JC}$ : Thermal resistance, junction-to-case.

$\Psi_{JB}$ : Thermal characterization parameter, junction-to-board.

$\Psi_{JT}$ : Thermal characterization parameter, junction-to-top center.

$$\theta_{JA} = (T_J - T_A) / P_D \quad (5-1)$$

$$\theta_{JB} = (T_J - T_B) / P_D \quad (5-2)$$

$$\theta_{JC} = (T_J - T_C) / P_D \quad (5-3)$$

Where,  $T_J$  = Junction temperature.

$T_A$  = Ambient temperature

$T_B$  = Board temperature

$T_C$  = Case temperature which is monitoring on package surface

$P_D$  = Total power dissipation

$\theta_{JA}$  represents the resistance of the heat flows from the heating junction to ambient air. It is an indicator of package heat dissipation capability. Lower  $\theta_{JA}$  can be considerate as better overall thermal performance.  $\theta_{JA}$  is generally used to estimate junction temperature.

$\theta_{JB}$  is used to measure the heat flow resistance between the chip surface and the PCB board.

$\theta_{JC}$  represents the thermal resistance between the chip surface and the package top case.  $\theta_{JC}$  is mainly used to estimate the heat dissipation of the system (using heat sink or other heat dissipation methods outside the device package).

**Table 5-5. Package thermal characteristics<sup>(1)</sup>**

| Symbol        | Condition                    | Package | Value | Unit |
|---------------|------------------------------|---------|-------|------|
| $\theta_{JA}$ | Natural convection, 2S2P PCB | LQFP144 | 48.76 | °C/W |
|               |                              | BGA100  | 78.32 |      |
|               |                              | LQFP100 | 57.42 |      |
|               |                              | LQFP64  | 51.81 |      |
| $\theta_{JB}$ | Cold plate, 2S2P PCB         | LQFP144 | 35.00 | °C/W |
|               |                              | BGA100  | 55.27 |      |
|               |                              | LQFP100 | 31.68 |      |

| Symbol        | Condition                    | Package | Value | Unit |
|---------------|------------------------------|---------|-------|------|
|               |                              | LQFP64  | 33.36 |      |
| $\theta_{JC}$ | Cold plate, 2S2P PCB         | LQFP144 | 12.03 | °C/W |

| 1.0          | 1. Initial Release                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Oct. 25, 2016 |
| 1.1          | 1. Repair history accumulation error                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Jan.24, 2018  |
| 2.0          | 1. Repair history accumulation error and electrical characteristics updated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | May.19, 2020  |
| 2.1          | 1. Update BGA100 parameter A max in <b><u>Table 5-1. BGA176 package dimensions</u></b> , the value changes from 0.84mm to 0.89mm.<br>2. Update Memory characteristics in <b><u>Table 4-24. Flash memory characteristics</u></b> .<br>3. Modify the DCMI to DCI in chapter <b><u>DCI characteristics</u></b> .<br>4. Modify LDO in run mode to LDO in normal power and normal driver mode, LDO in low power mode to LDO in normal power and low driver mode, Main LDO in under drive mode to LDO in low power and normal drive mode, Low Power LDO in under driver mode to LDO in low power and low drive mode in <b><u>Table 4-7. Power consumption characteristics</u></b> <sup>(2)(3)(4)(5)</sup> .<br>5. Modify the second DAC_OUT min to DAC_OUT max in <b><u>Table 4-36. DAC characteristics</u></b> .<br>6. Changed the range of T <sub>STG</sub> from -55-+150°C to -65-150°C in <b><u>Table 4-1. Absolute maximum ratings</u></b> <sup>(1)(4)</sup> .<br>7. Delete Fast mode Plus and add parameter t <sub>S(STA)</sub> , t <sub>S(STO)</sub> and t <sub>buff</sub> , update I2C Timing diagram in <b><u>I2C characteristics</u></b> .<br>8. Update the SPI Timing diagram in chapter <b><u>SPI characteristics</u></b> . | May.25, 2021  |
| 2.2          | 1. Correct the value of V <sub>REFP</sub> in <b><u>Table 4-28. ADC characteristics</u></b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Oct.18, 2021  |
| 2.3          | 1. Update <b><u>Table 4-1. Absolute maximum ratings</u></b> <sup>(1)(4)</sup> , Table 4-5. <b><u>Table 4-7 Power consumption characteristics</u></b> <sup>(2)(3)(4)(5)</sup> , <b><u>Table 4-11. Power supply supervisor characteristics</u></b> and <b><u>Table 4-12. ESD characteristics</u></b> <sup>(1)</sup> .<br>2. Update <b><u>Figure 4-8. SPI timing diagram – master mode</u></b> , <b><u>Figure 4-9. SPI timing diagram – slave mode</u></b> , <b><u>Figure 4-10. I2S timing diagram – master mode</u></b> , <b><u>Figure 4-11. I2S timing diagram – slave mode</u></b> , <b><u>Table 4-39. Standard SPI characteristics</u></b> <sup>(1)</sup> and <b><u>Table 4-40.</u></b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Jul.12, 2022  |

| Revision No. | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Date          |

|              | <p><u><b>I2S characteristics<sup>(1)(2)</sup></b></u>.</p> <p>3. Update <u><b>Table 4-20. Low speed internal clock (IRC32K) characteristics</b></u>, <u><b>Table 4-26. NRST pin characteristics</b></u> and <u><b>Table 4-28. I/O port AC characteristics<sup>(1)(2)</sup></b></u>.</p> <p>4. Add <u><b>Figure 4-4. Recommended PDR ON pin circuit</b></u> and <u><b>Table 4-10. EMI characteristics<sup>(1)</sup></b></u>.</p> <p>5. Update <u><b>Table 4-38. I2C characteristics<sup>(1)(2)</sup></b></u> and <u><b>Table 4-41. USART characteristics<sup>(1)</sup></b></u>.</p> <p>6. Update <u><b>Figure 5-4. BGA 100 recommended footprint</b></u> and <u><b>Figure 5-8. LQFP64 recommended footprint</b></u>.</p> |               |
| 2.4          | <p>1. Add notes for <u><b>Table 4-2. DC operating conditions</b></u> and <u><b>Table 4-7. Power consumption characteristics<sup>(2)(3)(4)(5)(6)</sup></b></u>, and update <u><b>Table 4-7. Power consumption characteristics<sup>(2)(3)(4)(5)(6)</sup></b></u>.</p> <p>2. Update <u><b>Table 4-25. Flash memory characteristics<sup>(1)</sup></b></u>.</p> <p>3. Add description of EMI and <u><b>Table 4-25. EMI characteristics<sup>(1)</sup></b></u>.</p> <p>4. Update <u><b>Figure 4-7. I2C bus timing diagram</b></u>.</p>                                                                                                                                                                                         | Jan. 4, 2023  |
| 2.5          | <p>1. Update clock tree.</p> <p>2. Modify <u><b>Table 2-3. GD32F405Zx LQFP144 pin definitions</b></u>, <u><b>Table 2-4. GD32F405Vx LQFP100 pin definitions</b></u>, <u><b>Table 2-5. GD32F405Vx BGA100 pin definitions</b></u>, <u><b>Table 2-6. GD32F405Rx LQFP64 pin definitions</b></u> and <u><b>Figure 4-1. Recommended power supply decoupling capacitors<sup>(1)(2)</sup></b></u>.</p>                                                                                                                                                                                                                                                                                                                           | Jul. 8, 2023  |
| 2.6          | <p>1. Modify description note(3) of <u><b>Table 4-26. I/O port DC characteristics<sup>(1)(3)</sup></b></u>.</p> <p>2. Modify <u><b>Table 4-27. I/O port DC characteristics<sup>(1)(3)</sup></b></u>.</p> <p>3. Modify <u><b>Figure 5-1. LQFP144 package outline</b></u>, <u><b>Figure 5-5. LQFP100 package outline</b></u> and <u><b>Figure 5-7. LQFP64 package outline</b></u>.</p>                                                                                                                                                                                                                                                                                                                                    | Jul. 15, 2024 |

## Important Notice

This document is the property of GigaDevice Semiconductor Inc. and its subsidiaries (the "Company"). This document, including any product of the Company described in this document (the "Product"), is owned by the Company under the intellectual property laws and treaties of the People's Republic of China and other jurisdictions worldwide. The Company reserves all rights under such laws and treaties and does not grant any license under its patents, copyrights, trademarks, or other intellectual property rights. The names and brands of third party referred thereto (if any) are the property of their respective owner and referred to for identification purposes only.

The Company makes no warranty of any kind, express or implied, with regard to this document or any Product, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The Company does not assume any liability arising out of the application or use of any Product described in this document. Any information provided in this document is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Except for customized products which has been expressly identified in the applicable agreement, the Products are designed, developed, and/or manufactured for ordinary business, industrial, personal, and/or household applications only. The Products are not designed, intended, or authorized for use as components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, atomic energy control instruments, combustion control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or Product could cause personal injury, death, property or environmental damage ("Unintended Uses"). Customers shall take any and all actions to ensure using and selling the Products in accordance with the applicable laws and regulations. The Company is not liable, in whole or in part, and customers shall and hereby do release the Company as well as its suppliers and/or distributors from any claim, damage, or other liability arising from or related to all Unintended Uses of the Products. Customers shall indemnify and hold the Company as well as its suppliers and/or distributors harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of the Products.

Information in this document is provided solely in connection with the Products. The Company reserves the right to make changes, corrections, modifications or improvements to this document and Products and services described herein at any time, without notice.
