

## GENERAL DESCRIPTION

The SGM8051/3 (single), SGM8052/5 (dual) and SGM8054 (quad) are high speed operational amplifiers with voltage feedback function. These devices can operate from 2.5V to 5.5V single supply. The SGM8051/2/3/4/5 feature an 8mV maximum input offset voltage and offer a low supply current of 2.3mA/amplifier.

The SGM8051/2/3/4/5 have excellent performance. They exhibit a wide bandwidth of 250MHz ( $G=+1$ ) and a 0.1dB gain flatness of 37MHz ( $G=+2$ ).

The SGM8051/2/3/4/5 provide wide input common mode voltage range and rail-to-rail output swing. The fast settling time and low distortion make the operational amplifiers appropriate for high speed ADC/DAC. The supply current of SGM8053/5 is 75 $\mu$ A in shutdown mode. The devices are suitable for use in portable instrumentation and battery-powered systems.

The SGM8051 is available in Green SOT-23-5 and SOIC-8 packages. The SGM8052 is available in Green SOIC-8 and MSOP-8 packages. The SGM8053 is available in Green SOT-23-6 and SOIC-8 packages. The SGM8054 is available in Green SOIC-14 and TSSOP-14 packages. The SGM8055 is available in a Green MSOP-10 package. They are specified over the extended -40°C to +125°C temperature range.

## **RECOMMENDED OPERATING CONDITIONS**

Operating Temperature Range ..... -40°C to +125°C

## **OVERSTRESS CAUTION**

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

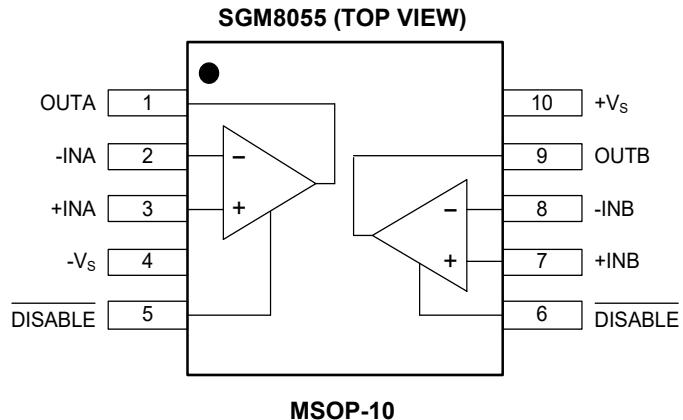

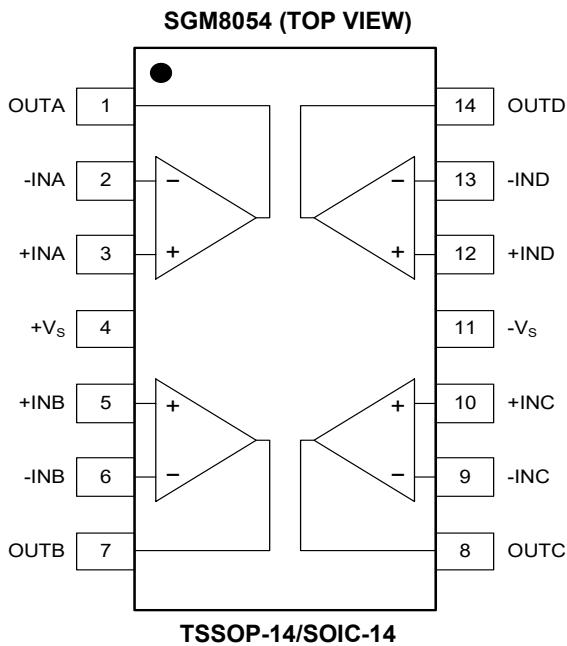

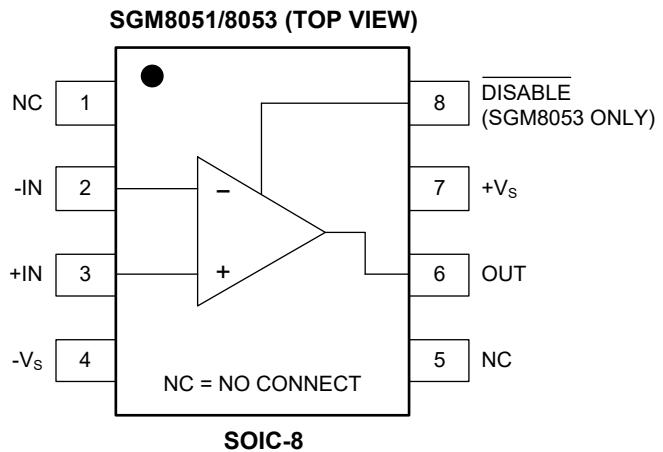

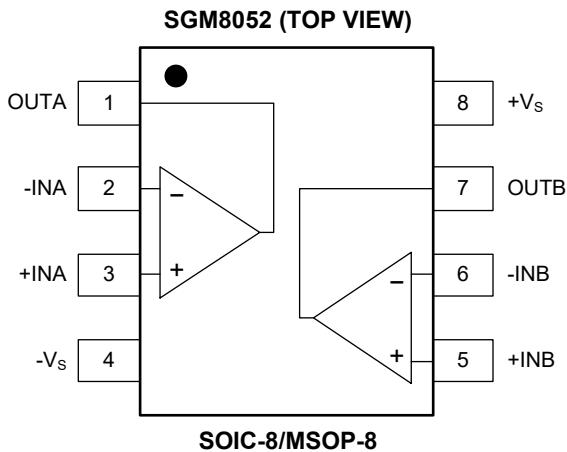

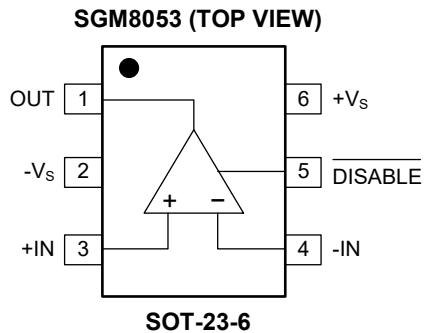

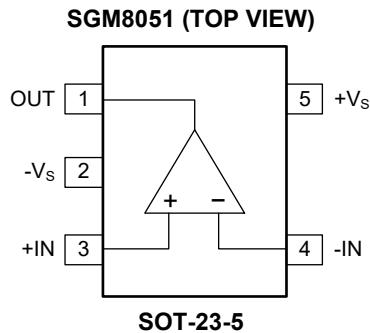

## **ESD SENSITIVITY CAUTION**

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
